EXPERIENCE

IoT Software Engineering Co-op

KORE Wireless Inc.

Rochester, NY

Jan. 2025 - May 2025

- Developed production features for a large .NET/WPF application using C#, XAML, and MVVM, including search workflows and configurable XML generation for business data imports
- Built and modified SQL Server stored procedures and queries supporting order automation, validation, reporting accuracy, and bulk data workflows
- Improved Boomi/NetSuite integration reliability by enhancing error tracking and resolution workflows, building test harnesses, and reproducing production failures in QA

Self Determination Assistant

People Inc.

Rochester, NY

July 2024 - Apr. 2025

- Supported individuals with daily living, budgeting, transportation, and service-plan goals while maintaining accurate documentation and records

EDUCATION

Rochester Institute of Technology, Rochester, NY

BS/MS, Computer Science (Accelerated Program)

Expected 2028

GPA: 3.68/4.00

- **Honors:** Farash Foundation's First in Family Scholar (2023); Richard T. Cheng Endowed Scholarship (2024); Patrick P. Lee Scholarship (2025); Presidential Scholar; Dean's List (Fall 2023 - 2026)

PROJECTS

Business Data Automation | Python, FastAPI, PostgreSQL, SQLAlchemy, Docker

- Built an end-to-end data validation and financial reconciliation pipeline that distinguishes fatal structural failures from invalid records that can be quarantined while valid data continues processing
- Implemented cent-precision payment, refund, and adjustment reconciliation with transactional PostgreSQL upserts, discrepancy detection, and FastAPI reporting endpoints
- Built 52 pytest tests covering validation failures, reconciliation edge cases, database transactions, API behavior, and end-to-end workflows, with Ruff and GitHub Actions CI

GitProfileLens | JavaScript, GitHub API, GraphQL, GitHub Apps

- Built a GitHub portfolio auditing tool that analyzes profiles and repositories using deterministic category scoring and generates actionable presentation and discoverability recommendations
- Implemented authenticated private-repository analysis with GitHub App authorization, encrypted session material, cache isolation, pagination, and explicit privacy boundaries
- Added automated tests and CI alongside shareable audit exports and a deployed web experience supporting public and authenticated repository analysis

Steam Value Lookup | Python, Flask, SQLAlchemy, Steam Web API

- Built a Flask application integrating Steam APIs to analyze game libraries, current store prices, playtime, achievements, and supported inventory values
- Reduced API-bound lookup latency by fetching store prices concurrently and aggregating results into per-game and library-level statistics
- Designed the lookup flow to handle private profiles, empty libraries, unavailable pricing, and external API failures without breaking library analysis

SKILLS

Languages: Python, TypeScript, JavaScript, C#, Java, SQL, C, HTML/CSS

Frameworks/Libraries: FastAPI, Flask, React, Next.js, .NET/WPF, SQLAlchemy, pandas

Databases: PostgreSQL, SQL Server, Firebase, Weaviate

Technologies: Git, Docker, GitHub Actions, pytest, Ruff, Linux, REST APIs, XAML, MVVM, Boomi, SSMS
